ExtraHop Named a Leader in The Forrester Wave™:

Network Analysis And Visibility, Q2 2023

"Commands the market with its depth and breadth of enterprise features."

"Large enterprises with hybrid and multicloud deployments should evaluate ExtraHop."

LEADER

ExtraHop's ability to decrypt all traffic, including TLS 1.3 and PFS, provides deep insight into all packets and the payloads they contain.

ExtraHop's superior vision focuses on exposing assets that touch the network without introducing additional overhead and noise that require a heavy lift from SOC analysts.

The UI is intuitive and easy to navigate, providing contextual breakdowns of what's happening and why it's important.

IT also gives robust MITRE ATT&CK correlation and the ability to drill down without having to open multiple consoles.

"Reference customers described ExtraHop relationship as being built on 'mutual trust' with a 'focus on customer enablement'"
